Boiler Housing Kit

Boilers vary in size & position. Here's how to create your own bespoke housing.

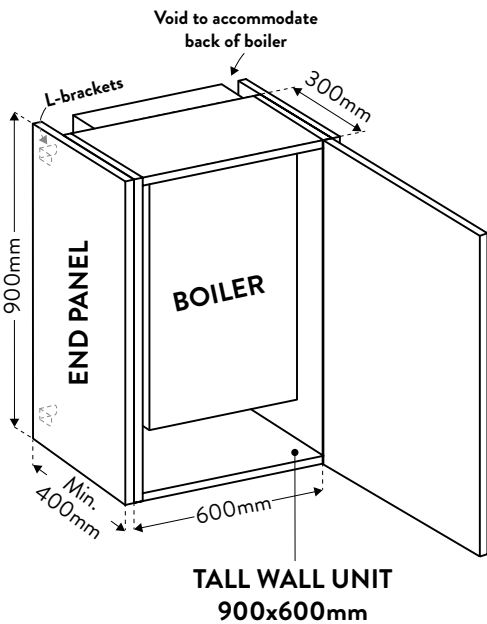

- As boilers are generally deeper than the 300mm depth of our tall wall cabinets you must bring the wall cabinet forward and attach the cabinet to the end panels (min. depth 400mm).
- The end panels need to be securely attached to the wall with L-brackets.

What you need:

- Tall Wall Unit 900 × 600mm (Leaving back panel out)
Includes: 900mm height tall wall cabinet, 895 × 596mm door & 110 degree hinges.
- Base End Panels 900 × 650mm (Cut to 900 × 400mm size)
Optionally use Tall End Panels 2400 × 650mm cut to size if end panels need to run down to the worktop.
- L-brackets.

Please note: Boilers vary in size and there is no set standard. This will have an effect on filler/door/end panel sizes. Please check boiler dimensions carefully prior to installation to ensure the housing is suitable for the boiler it's being used for.

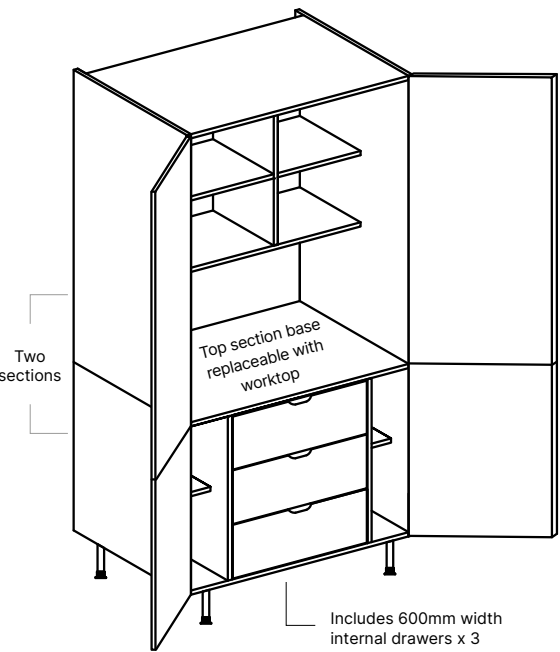

It's the installer's responsibility to ensure the housing is fitted correctly and in line with boiler safety regulations.

RAL Suggestions

Please note TKC's stocked doors and standard paint to order colour palette, are NOT painted to RAL references. The RAL reference codes shown here are intended for use as a guide only, where a RAL colour may be similar to our stocked colours and standard paint to order palette. As the colours are not painted to RAL references, the match will never be exact and it is therefore the retailers responsibility to ensure the suitability of the RAL reference. TKC will accept no responsibility or liability for this.

Due to their manufacturing process vinyl doors must not be exposed to temperatures above 70° C as this may cause damage to the door's surface.

TIMBER / VENEER / PAINT TO ORDER DOORS

Timber is a natural product; therefore colour grain structure and features will differ from door to door. Raw timber doors must be treated before use.
Timber and veneer doors have a unique and natural characteristic and because of this colours may change over time when exposed to sunlight. Please be aware of this natural colour change when ordering additional doors to suit a previous install. We also recommend you change your timber door samples every six months due to this reason.
Timber can be prone to expansion and shrinkage based upon the environment which it is installed in. Timber and veneered doors are

affected by moisture; if there is too much moisture in the environment it can have an adverse effect on the door over a period of time and it may lead to timber expanding especially during winter periods. Excess moisture may also be found in new builds and properties where renovation work has been carried out; examples include plastering or floor screeding etc. In the summer months when the environment is drier shrinkage may occur in the timber.

This natural movement of timber may cause the surface finish of the timber / veneered door (i.e. painted varnished lacquered finishes etc) to move with the timber. If this occurs then there is a chance that it may result in shrinkage and hairline cracks appearing on the door.

Please check the moisture content of a room before installing timber or veneer doors. The above also applies to Paint to Order doors.

ENVIRONMENTAL INFORMATION

Newly plastered rooms plaster repairs floor screeding renovations etc should be left to dry out thoroughly before installation of doors whatever their material. When fitting doors adjacent to an oven a suitable heat shield must be used.
